Legend	
✓	Support obtained from ISV
☑	Spectra Logic certified configuration
TIP	Testing in Progress
*	See Note
W	Installed and working at customer site
E	Fully expected to work; Testing not yet initiated
N	Not supported
S	Scheduled for certification

How to use this guide:

- If you are considering a new design or an upgrade to a current system – find your client(s) below and verify that they are approved by the client (ISV) or by Spectra with a check in the appropriate box. Periodically, Spectra is made aware of a compatibility that is in production but has not gone through official testing by the ISV or Spectra. In these cases, a “W” denotes it is reported as working but should be verified before going into production.
- An E is inserted if the ISV reports that they support a specific generation but it has not yet been tested by the ISV or Spectra.
- Note that all Spectra libraries (except the SL3) use the same SCSI ID and maintain the same interface – so most ISVs certify with one library and allow compatibility with all Spectra libraries from a single instance test. Exceptions to this are noted as appropriate.
- Only the T950 and TFinity support TS drives

- The SL3 is a new library for a specific market channel and is being evaluated now for general compatibility – it uses a standard SCSI interface and should generally be considered equivalent to the Stack library in functionality and interface.
- Notes on viability of each ISV are general and for reference only – i.e. if a report of it being discontinued or no new designs, we note that but cannot guarantee accuracy.
- For BlackPearl and Rio compatibility details, see Object compatibility matrix with detailed implementation notes and best practices. For these, the interface is via either DS3 or S3 to the BlackPearl Object appliance – compatibility to tape is guaranteed as BlackPearl handles that interface and abstracts that from the ISV via the S3 interface.
- If you are an ISV/Partner wanting to be on the compatibility list either direct to tape or via S3/DS3 via BlackPearl, send an email to xxx@spectralogic.com
- For S3 integration, please begin by referencing the “designing with Spectra S3 compatible storage solutions” design guide here:
